

# Badge Types

**IDentilam supplies all styles of event badges and ID cards from stock, as well as custom badges.**

## Badge Types

### PVC Cards

Identical in size and construction to credit cards, PVC badges are available in plain white, a variety of base colours or with a pre-printed background. The cards can be personalised with data and photos using our range of DOPPIE™ printers, in both full colour and monochrome. All cards can be worn in holders, wallets or from lanyards.

### Large Format PVC Cards

As well as standard credit card size, large format PVC badges can be produced with the DOPPIE LB or LBE printers. With these, badge sizes 110x54mm, 140x54mm, 124.8 x 87.8mm or 140 x 87.8mm can be produced making them ideal for sporting events or venues where fast and easy identification is required.

### BIO (degradable) PVC Cards

As an alternative to standard PVC which is resistant to biodegradation, our new Bio PVC Cards have the following properties:

- Same stability as standard calendared PVC
- Same high white content/appearance
- Same suitability for printing, embedding, embossing, die cutting
- Same ink and laminate adhesion

Bio PVC Cards are both aerobically and anaerobically degradable and once broken down all that is left is matter that can easily be worked into the soil or water and which has no toxic content.

### Paper Badges

Paper badge inserts come in many different sizes and are supplied on perforated A4 or A6 sheets. They can be printed front and reverse with your company or event background design and personalised with variable data and photo. Paper badges can be inserted into a semi-rigid conference card holder, clear PVC wallet or alternatively heatseal encapsulated. Visit our Accessories website at [www.identilam.co.uk/accessories](http://www.identilam.co.uk/accessories) to see the full range of stock items.

### Window Badges

Supplied pre-printed with your event or company logo, plastic window badges are personalised with individual details such as name and organisation by adding a small card insert. The badges are fully reusable and are available with a choice of integral clip or attachment.

### Custom Badges

Badges can be custom made to order in unusual shapes and sizes, to represent perhaps a corporate logo/design or product. Custom badges are available in a variety of materials.

## Badge Types

### Technology

Many different technologies can be incorporated into our badges, including barcodes for attendance tracking and management at events and RFID/Mifare for attendance tracking or to store personal data and purses. They are commonly used in football stadia, universities, transport and vending applications. The iCLASS (contactless smart card) is optimised for access control and can store biometric templates and other personal details.

### Security Devices

A number of security devices can be added to our cards & badges for additional security, for example:

#### Holofoil

We will emboss your custom design into the holofoil. The holofoil overlay prevents reproduction through photocopying or scanning.

#### Security Printing

Options include fine line guilloche design, UV ink visible under only a special lamp, and ESP (extra small printing) visible under a microscope.

#### Vestigial Image

This involves the replication and repeating of the card holder's image, ghosted into the background.

#### Holographic Overlamine

This provides extra protection against wear and abrasion combined with a 2D image that refracts under light.
